

Window Dressings

VBoard®, VGuard®, FlexBoard® and Riveted UChannels® can all be used to protect windows and related products from shipping, strapping and handling damage. All are highly durable, recyclable, and easy for workers to apply and remove.

VBoard can be stapled to window frames to prevent strapping damage and otherwise safeguard critical edges. FlexBoard, a notched, flexible version of VBoard, can be used to protect arch windows and other unusually shaped architectural elements.

Riveted UChannels provide three-sided edge protection for windows and other building components. When banded to the edges of heavy patio doors and similar products, they prevent damage during shipping as well as when the components are dragged into place by workers at the construction site.

VGuard, when stapled to the corners of window frames, keeps them from rubbing against one another in the truck on their way to the job site.
