

No-hassle temporary shelving unit ideal for retail presentation

PalletTop™ Display is the fast, inexpensive solution for easy-setup and easy-takedown shelving

The PalletTop Display combines the lightweight, yet sturdy support of PF PalletTop® with the vertical stacking strength of VBoard® to create an easy-to-assemble temporary shelving unit that flows seamlessly from manufacturing to shipping, and finally, to the retail floor in four simple steps:

1 Patented PF PalletTops are the center of this unique product combination. Laminated paperboard pallet tops easily unfold to form a sturdy square or rectangle shape to fit any custom or retail application. The PF PalletTop adheres to the pallet, forming the base and top of the unit, as well as the inner shelving support.

2 VBoard is used on each outside corner to create a support system. Wood, plastic or corrugate material (depending on product weight restrictions) is used for the inner shelving.

3 The entire unit's easy accessibility allows filling from all four sides, and is then stretch-wrapped for one-way shipping to its final destination, where it's ready for immediate presentation. Both standard and custom print options are available for this product.

4 When finished, the product disassembles quickly, and is 100% recyclable.

PalletTop Display is ideal for one-way shipping and retail applications. This easy-setup/easy-takedown unit can get products quickly from manufacturing to retail floor; just pull off the stretch wrap and the product is ready for retail presentation.

Contact your local Laminations representative to find a unit for your specific application.
