

# Sustainable Solutions

## Being Green – the Responsible Choice

All Laminations® paperboard products are made from recycled fiber, approximately 80% of which is post-consumer waste and 20% of which is pre-consumer waste. They are also 100% recyclable, and in some cases can be used more than once.

Laminations® products provide protection with a minimum amount of packaging material, making them a natural choice for source reduction.

### For us, sustainability is two-fold:

- Act in a responsible manner to reduce our own carbon footprint.
- Provide our customers with solutions to meet their sustainability goals.

We have an internal focus centered on process improvement, with a commitment to invest in equipment and practices that reduce the amount of energy, natural resources and waste required to operate our businesses.

For those who do business with us, we have a customer focus. We will design and engineer products that utilize less material, are produced with more eco-friendly processes and ultimately reduce the impact our packaging has on the environment.

The results of this effort will deliver packaging and display solutions that have equal or better performance in the supply chain, improved outcomes on sustainability scorecards and give our customers a responsible choice.
